State of the Art Invoice Management

Invoices are a large part of the business day to day. Whether electronic or paper-based, it's important they are processed in a timely manner. From recording and verification, to cost allocation and approval, through to final booking and initiation of payment, invoice management requires integration into existing ERP systems and procedures to ensure a smooth process.

Automation of incoming invoices streamlines the process, ensuring the correct invoice is delivered to the appropriate team member and department. GDO Invoice Management reduces the time employees spend manually processing traditional invoices, which also reduces costs, risk and complexity.

GDO Invoice Management ensures incoming invoices are processed in full and the retrieved data is automatically transferred into existing ERP systems. Our invoice dashboard provides a clear overview of all incoming invoices, allowing for a range of evaluation and reporting functions.

Invoices and receipts are captured and classified automatically and passed onto the correct employee according to established workflows. This provides improved control over accounts payable cycles, ensuring no invoices are forgotten.

GDO Invoice Management is adaptable to your method of invoice processing, ensuring an effective solution regardless if they're recorded directly into a central location, scanned by department or by accounting.

Designed for your needs:

Grace Digital Office's solution can be rolled out quickly and with minimal investments. You don't need to be a large organisation to enjoy the benefits of Invoice Management. In fact, it has the most benefits for small and medium sized enterprises who struggle to employ full-time dedicated book keepers and account keeping staff.

We help them to do more in less time, in turn helping you to keep your overheads down.

The Grace Digital Office advantage:

- » Reduce effort required to record invoices, and therefore throughput overall format
- » Process costs are reduced while increasing process and data quality
- » Role and user- based access to protect data
- » Discount and liquidity losses are no longer a concern
- » Transparency is created within the company via an up-to-date workflow overview
- » Accompanying correspondence, such as receipts or emails can be filed against a related transaction
